

E-Commerce User Journey Funnel & Revenue Leakage Analysis

Analyze customer behavior across the Browse → Cart → Checkout → Purchase journey to identify conversion bottlenecks, quantify revenue leakage, and recommend optimization opportunities.

Analysis By: Subhabrata Sahoo

Business Challenge

Only 10.04% of visitors complete a purchase, resulting in significant revenue leakage across the funnel. This project identifies where customers drop off and estimates the business impact of those losses.

Key Findings

- Funnel Conversion Rate: 10.04%
- Revenue Generated: ₹277K
- Largest Leakage: Cart → Checkout
- Potential Revenue Opportunity: ₹2.48M

Executive Overview

High-level funnel performance, conversion metrics, revenue leakage, and executive insights for decision makers.

Funnel Leakage Diagnostics

Deep-dive analysis of conversion performance across devices, channels, regions, and product categories to identify root causes of leakage.

Revenue Opportunity Simulator

Interactive scenario analysis showing how conversion improvements can increase purchases and revenue.

Strategic Recommendations

Prioritized business recommendations, expected impact, implementation effort, and action plans to improve funnel performance.

Executive Conclusion

The analysis identified significant **funnel leakage** across the customer journey, with the **Cart** → **Checkout** stage contributing the **highest revenue loss (~₹964K)**.

Mobile users and Organic traffic show the **lowest conversion performance**, indicating friction in the purchase journey.

Prioritizing **checkout** optimization, **mobile experience** improvements, and **organic traffic** enhancements could unlock substantial revenue recovery and improve overall funnel efficiency.
